across profile

Optimised  
converting  
productivity

- We use **good quality, high strength, and low weight core pipe** for maximum utilization of reel
- We use the most **advanced technology for testing** various Parameters – Moisture, GSM, BF
- Our **BF/BS** of Paper is usually **higher than** what we even claim! BF is on the plus side with a good **RCT Value**, resulting in increased box compression strength and stacking strength
- We maintain **Cobb** or as per standard requirements
- Reels are tightly wound, having minimum or **no joints**
- Lab report of every reel with each invoice ensures transparency in the quality of the paper.
- New and rigid core pipe for reeling the paper ensures smooth running of paper in the corrugation machine. The core plugs ensure no damage to reels while unloading the reels.
- Special care is taken while packing and loading, ensuring safe delivery to our customers
